

## NEW SUDAN

Construction begins  
October 2005

HYDRAFORM's Technical Director, Quintin Booyen, visited Sudan conducting a tour and training programme in the region. Sudan hit hard by civil war for over 20 years, is now on its way with new reconstruction and development programmes.

Homes and buildings have been built using the HYDRAFORM building system.

With cement costing over \$40 per bag, the **HYDRAFORM** building system comes in tops with costs savings and cement reduction in construction.
