

FEATURES:

- Pneumatic (air pressure) operated
- 100 Liter material mix hopper
 - Low maintenance
- Kit form- on site assembly

ADVANTAGES:

- Adding the P3 pneumatic loading hopper system to a M7 static operation increases productivity as the material is carried from the pan mixer by a conveyor (option additional) to the P3 feeding hopper that is directly positioned above the machine.
- The material offloads into the pneumatic hopper with no human intervention and maintains the machine's hopper with full capacity to load the chamber. Minimal operating staff.

PRODUCTION:

The hopper is pushed by an air cylinder that is powered by a compressor (200ℓ recommended, not included) speeding up chamber filling thus speeds up production and minimises labour effective.

RECOMMENDED ACCESSORIES:

- Pan mixers (preferably 300lt)
 - 6mt conveyor, 200ℓ compressor.
- (Both items can be sourced locally or on request supplied by Hydraform)
